

GREENHOUSE MANAGEMENT

Do you have a greenhouse?

With **ezone.io** you can completely manage your greenhouse. You can, for example, start irrigation manually via your smartphone or automatically through a pre-established program based on the day and time.

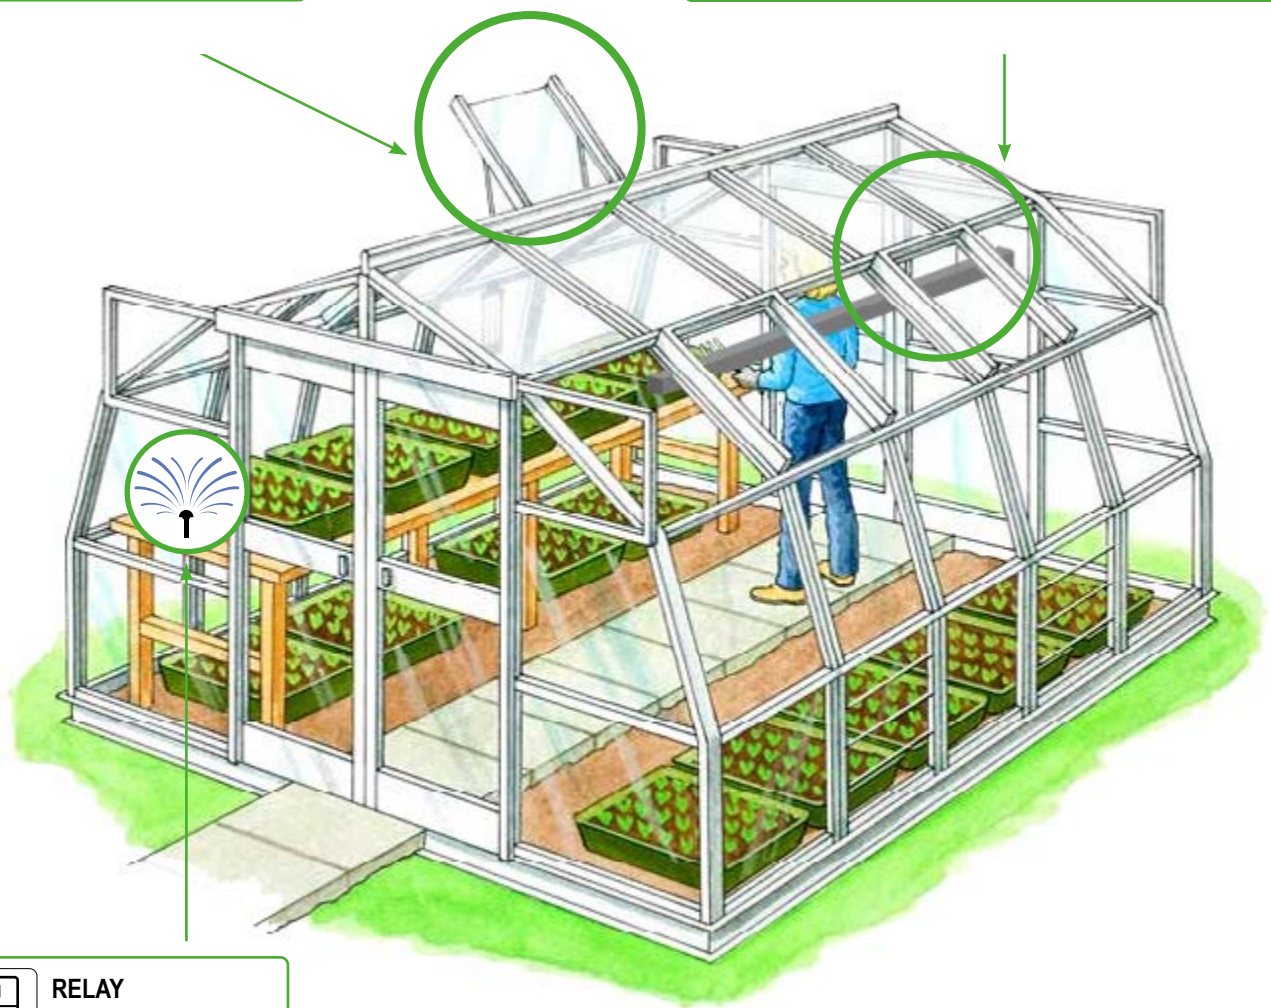

If the greenhouse has motorized windows you can open and close them as you wish to regulate the temperature. The lights are also fully controllable via **ezone.io** and again you can turn them on manually or schedule them. You can also use a light sensor to ensure your plants get the right amount of light.

Thanks to the **ezone.io** APP you can also create pre-established scenarios which in one click prepare your greenhouse in the ideal condition for the moment it is activated.

Using the **Mini HUB** accessory you can control everything from the comfort of your sofa
