

The Smart Home solution that makes your home smart

KIT STAND-BY KILLER

Eliminate the consumption of your appliances on stand-by.

The consumption of appliances on standby can affect up to 10% of your bill.

With our kit you can solve this problem, just purchase it and install it inside the plate corresponding to the appliance to be controlled.

The ezon.io relay device will allow you to completely turn off connected electrical appliances and reactivate them only when necessary, via the APP. The device also allows you to program the connected appliance to turn on or off when you want.

And if you want to activate your electrical appliance through voice commands or from outside your home, just purchase one of our hubs.
